## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-6 are allowable over prior art of record.

### ***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: The applicants have claimed uniquely distinct features in the instant invention, which are not found in the prior art, either singularly or in combination. The independent claims have the following unique features:

1. Regarding claim 1 - A first converting unit rewriting part of IP address information and port number information within a plurality of IP packets when the plurality of IP packets to be relayed, which form a TCP connection, pass through the router device, a unit extracting information indicating an original connection destination of the TCP connection, generating a TCP connection from the router to the connection destination, and linking the two TCP connections with streams, and a second converting unit rewriting part of IP address information and port number information within a plurality of IP packets forming a TCP connection for the TCP connection to the original connection destination, wherein said first and said second converting units handle the two TCP connections as a pair, store information needed for rewriting, which is related with a identification number, in a database by assigning a unique

identification number to the pair, and manages the two TCP connections with the unique identification number stored in the database.

2. Regarding claim 6 - Rewriting part of IP address information and port number information within a plurality of IP packets when the plurality of IP packets to be relayed, which form a TCP connection, pass through a router device, extracting information indicating an original connection destination of the TCP connection, generating a TCP connection from the router to the connection destination, and linking the two TCP connections with streams, and rewriting part of IP address information and port number information within a plurality of IP packets forming a TCP connection for the TCP connection to the original connection destination, and handling the two TCP connections as a pair, storing information needed for rewriting, which is related with a identification number, in a database by assigning a unique identification number to the pair, and managing the two TCP connections with the unique identification number stored in the database.

Each independent claim identifies the uniquely distinct features, either singularly or in combination, fail to anticipate or render the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

*Conclusion*

Claims 1-6 being allowable, **Prosecution On The Merits Is Closed** in this application.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
